LEJS40

## AC Servo Motor Type

## Ball Screw Drive Series LEJS

Size: 40, 63
Work load: 85 kg
Positioning repeatability: $\pm \mathbf{0 . 0 1} \mathbf{m m}$ (High precision type) Max. speed: 1800 mm/s
Max. acceleration/deceleration: $20000 \mathrm{~mm} / \mathrm{s}^{2}$
*1 ISO 14644-1
*2 The particle generation characteristics change depending on the suction flow rate. Refer to page 24 for details.

## Belt Drive Series LEJB

Max. stroke: 3000 mm Max. speed: 3000 mm/s Max. accelerationdecceleration: $20000 \mathrm{~mm} / \mathrm{s}^{2}$

## AC Servo Motor Driver

* Not applicable to UL.
- For absolute encoder
- Pulse input type Series LECSB
- CC-Link direct input type Series LECSC
- SSCNET III type Series LECSS
- SSCNET III/H type Series LECSS-T
- MECHATROLINK type Series LECY $\square$

## Series LEJ

## -High precision/High rigidity

- Reduction of the installation labour

Possible to mount the main body without removing the external cover, etc.

Equipped with seal bands as standard
Covers the guide, ball screw and belt. Prevents grease from splashing and external foreign matter from entering.

## AC Servo Motor

## Ball Screw Drive/Series LEJS

| Model | Lead [mm] |  |  | Max. speed [mm/s] |
| :---: | :---: | :---: | :---: | :---: |
| LEJS40 | 24 | 16 | 8 | $1800($ Lead 24) |
| LEJS63 | 30 | 20 | 10 | 1800 (Lead 30) |

-Weight reduction Weight reduced by approx. $37 \%$

* Stroke: 600 mm

LEJS63 15.2 kg
-Workpiece does not interfere with the motor Table height > Motor height

$-\infty$

- Solid state auto switch can be mounted (For checking the limit and intermediate signal) - Switch wiring can be placed in the body -D-M9 $\square$ W (2-colour indication), D-M9 $\square$

Clean Room Specification

## Ball Screw Drive Series 11-LEJS Size: 40,63 ISO Class $4^{* 1, * 2}$

- Built-in vacuum piping
- Possible to mount the main body without removing the external cover, etc.
* 1 ISO 14644-1
*2 The particle generation characteristics change depending on the suction
flow rate. Refer to page 24

## Application Examples

Glue dispensing/High speed trajectory is available

## Series Variations

Ball Screw Drive/Series LEJS Clean room compaible ${ }^{12}$

*1 Consult with SMC for non-standard strokes as they are produced as special orders.
*2 Except lead 24 and 30 mm

## Belt Drive/Series LEJB

Note 1) For positioning type, setting needs to be changed to use with maximum set values.
Setup software (MR Configurator2 ${ }^{\text {TM }}$ ) LEC-MRC2E is required.
Note 2) Available when the Mitsubishi motion controller is used for the master equipment.

## Servo adjustment using auto gain tuning

## Auto resonant filter function

- Control the difference between command value and actual action
* High-speed positioning is possible since gains etc. are adjusted automatically!

## Auto damping control function

- Automatically suppress low frequency machine vibrations (up to 100 Hz )
* Can be set automatically by auto tuning.

## With display setting function

 number and the occupied station count.

# Electric Actuator/High Rigidity Slider Type AC Servo Motor Ball Screw Drive/Series LEJS Belt Drive/Series LEJB Model Selection 

## Selection Procedure

?

Step 1
Check the speed-work load.

Step 3 Check the allowable moment.

Selection Example

Operating conditions

- Work load: 60 [kg]
- Workpiece mounting condition:
- Speed: 300 [mm/s]
- Acceleration/Deceleration: 3000 [mm/s $\left.{ }^{2}\right]$
- Stroke: 300 [mm]
- Mounting orientation: Horizontal
- Motor type: Incremental encoder
- External force: 10 [N]

Check the speed-work load.
Select the product by referring to "Speed-Work Load Graph" (Page 14).
Selection example) The LEJS63S3B-300 is temporarily selected based on the graph shown on the right side.
The regeneration option may be necessary.
Refer to page 14 for "Required Conditions for Regeneration Option".

## Step 2 Check the cycle time.

Refer to method 1 for a rough estimate, and method 2 for a more precise value.

## Method 1: Check the cycle time graph (Page 15)

The graph is based on the maximum speed of each size.

## Method 2: Calculation

Cycle time $T$ can be found from the following equation.
$\mathrm{T}=\mathrm{T} 1+\mathrm{T} 2+\mathrm{T} 3+\mathrm{T} 4[\mathrm{~s}]$

- T1 and T3 can be obtained by the following equation.

$$
\mathrm{T} 1 \text { = } \mathrm{V} / \mathrm{a} 1[\mathrm{~s}] \quad \mathrm{T} 3=\mathrm{V} / \mathrm{a} 2[\mathrm{~s}]
$$

The acceleration and deceleration values have upper limits depending on the workpiece mass and the duty ratio.
Check that they do not exceed the upper limit, by refering to "Work load-Acceleration/Deceleration Graph (Guide)" (Pages 17 to 19).
For the ball screw type, there is an upper limit of the speed depending on the stroke. Check that if it does not exceed the upper limit, by referring to the specifications (Page 28).

- T2 can be found from the following equation.

$$
\mathrm{T} 2=\frac{\mathrm{L}-0.5 \cdot \mathrm{~V} \cdot(\mathrm{~T} 1+\mathrm{T} 3)}{\mathrm{V}}[\mathrm{~s}]
$$

- T4 varies depending on the motor type and load. The value below is recommended. T4 $=0.05$ [s]

Calculation example)
T1 to T4 can be calculated as follows.
$\mathrm{T} 1=\mathrm{V} / \mathrm{a} 1=300 / 3000=0.1[\mathrm{~s}]$,
$\mathrm{T} 3=\mathrm{V} / \mathrm{a} 2=300 / 3000=0.1[\mathrm{~s}]$
$\mathrm{T} 2=\frac{\mathrm{L}-0.5 \cdot \mathrm{~V} \cdot(\mathrm{~T} 1+\mathrm{T} 3)}{\mathrm{V}}$
$=\frac{300-0.5 \cdot 300 \cdot(0.1+0.1)}{300}$

$$
\text { = } 0.90 \text { [s] }
$$

$\mathrm{T} 4=0.05$ [s]
Therefore, the cycle time can be obtained as follows.
$\mathrm{T}=\mathrm{T} 1+\mathrm{T} 2+\mathrm{T} 3+\mathrm{T} 4$
$=0.1+0.90+0.1+0.05$
$=1.15$ [s]

## Step 3 Check the allowable moment.

Refer to "Dynamic Allowable Moment" graphs (Pages 20 and 21).

Selection example) Select the LEJS63S3B-300 from the graph on the right side. Confirm that the external force is 20 [ N ] or less.
(The external force is the resistance due to cable duct, flexible trunking or air tubing.)

<Speed-Work load graph>
(LEJS63)

L : Stroke [mm]
V : Speed [mm/s]
a1: Acceleration [mm/s²]
a2: Deceleration $\left[\mathrm{mm} / \mathrm{s}^{2}\right]$
T1: Acceleration time [s]
Time until reaching the set speed
T2: Constant speed time [s]
Time while the actuator is operating at a constant speed
T3: Deceleration time [s]
Time from the beginning of the constant speed operation to stop
T4: Settling time [s]
Time until in position is completed
T5: Resting time [s]
Time the product is not running
T6: Total time [s]
Total time from T1 to T5
Duty ratio: Ratio of T to T6
$\mathrm{T} \div \mathrm{T} 6 \times 100$

## Dynamic Allowable Moment

* This graph shows the amount of allowable overhang (guide unit) when the centre of gravity of the workpiece overhangs in one direction. When selecting the overhang, refer to "Calculation of Guide Load Factor" or the Electric Actuator Selection Software for confirmation, http://www.smc.eu

## LEJ Series

AC Servo Motor
Clean Room Specification

## Dynamic Allowable Moment

* This graph shows the amount of allowable overhang (guide unit) when the centre of gravity of the workpiece overhangs in one direction. When selecting the overhang, refer to "Calculation of Guide Load Factor" or the Electric Actuator Selection Software for confirmation, http://www.smc.eu

## Calculation of Guide Load Factor

1. Decide operating conditions.

Model: LEJS/LEJB
Size: 40/63
Mounting orientation: Horizontal/Bottom/Wall/Vertical
2. Select the target graph with reference to the model, size and mounting orientation.
3. Based on the acceleration and work load, obtain the overhang [mm]: Lx/Ly/Lz from the graph.
4. Calculate the load factor for each direction.
$\alpha x=X c / L x, \alpha y=Y c / L y, \alpha z=Z c / L z$
5. Confirm the total of $\alpha \mathbf{x}, \alpha \mathbf{y}$ and $\alpha \mathbf{z}$ is 1 or less.
$\alpha x+\alpha y+\alpha z \leq 1$
When 1 is exceeded, please consider a reduction of acceleration and work load, or a change of the work load centre position and series.

## Example

Acceleration [mm/s²]: a
Work load [kg]: m
Work load centre position [mm]: Xc/Yc/Zc
overhan

1. Operating conditions

Model: LEJS
Size: 40
Mounting orientation: Horizontal
Acceleration [mm/s²]: 5000
Work load [kg]: 20
Work load centre position [mm]: Xc=0, Yc=50, Zc = 200
2. Select the graph on page 20, top and left side first row.

3. $L x=180 \mathrm{~mm}, \mathrm{Ly}=170 \mathrm{~mm}, \mathrm{Lz}=360 \mathrm{~mm}$
4. The load factor for each direction can be obtained as follows.

$$
\begin{aligned}
& \alpha x=0 / 180=0 \\
& \alpha y=50 / 170=0.29 \\
& \alpha z=200 / 360=0.56
\end{aligned}
$$

5. $\alpha x+\alpha y+\alpha z=0.85 \leq 1$

## LEJ Series

AC Servo Motor Clean Room Specification

Table Accuracy (Reference Value)

| Model | Traveling parallelism [mm] (Every 300 mm ) |  |
| :---: | :---: | :---: |
|  | (1) C side traveling <br> parallelism to A side | (2)D side traveling <br> parallelism to B side <br> LEJ $\square \mathbf{4 0}$$\quad 0.05$ |
|  | 0.05 | 0.03 |

Note) Traveling parallelism does not include the mounting surface flatness.

## Table Displacement (Reference Value)

Note) This displacement is measured when a 15 mm aluminium plate is mounted and fixed on the table. (Table clearance is included.)

## Particle Generation Measuring Method

The particle generation data for 11-LEJS series are measured in the following test method.

## Test Method (Example)

Operate the specimen that is placed in an ISO Class 5 equivalent clean bench, and measure the changes of the particle concentration over time until the number of cycles reaches the specified point.

Measuring Conditions

| Measuring <br> instrument | Description | Laser dust monitor (Automatic particle counter by lightscattering method) |
| :--- | :--- | :---: |
|  | Minimum measurable particle diameter | $0.1 \mu \mathrm{~m}$ |
|  | Suction flow rate | $28.3 \mathrm{l} / \mathrm{min}$ (ANR) |
| Setting <br> conditions | Sampling time | 5 min |
|  | Interval time | 55 min |
|  | Sampling air flow | 141.5 L (ANR) |

Particle generation measuring circuit

## Test Conditions

| Size | Speed [mm/s] | Model | Workpiece mass [kg] | Acceleration [ $\mathrm{mm} / \mathrm{s}^{2}$ ] | Duty ratio [\%] |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 40 | 1200 | 11-LEJS40 $\square$ A-200 | 4 | 13000 | 100 |
|  | 600 | 11-LEJS40 $\square$ B-200 |  | 10000 |  |
| 63 | 1200 | 11-LEJS63 $\square$ A-300 |  | 13000 |  |
|  | 600 | 11-LEJS63 $\square$ B-300 |  | 10000 |  |

* Mounting position: Horizontal

## Evaluation Method

To obtain the measured values of particle concentration, the accumulated value Note 1) of particles captured every 5 minutes, by the laser dust monitor, is converted into the particle concentration in every $1 \mathrm{~m}^{3}$.
When determining particle generation grades, the $95 \%$ upper confidence limit of the average particle concentration (average value), when each specimen is operated at a specified number of cycles Note 2) is considered.
The plots in the graphs indicate the $95 \%$ upper confidence limit of the average particle concentration of particles with a diameter within the horizontal axis range.

Note 1) Sampling air flow rate: Number of particles contained in 141.5 L (ANR) of air
Note 2) Actuator: 1 million cycles
Note 3) The particle generation characteristics (Page 24) provide a guide for selection but is not guaranteed.

|  | Guide type |  |  | Linear guide |  |  |  |  |  |
|  | Operating temperature range［ ${ }^{\circ} \mathrm{C}$ ］ |  |  | 5 to 40 |  |  |  |  |  |
|  | Operating humidity range［\％RH］ |  |  | 90 or less（No condensation） |  |  |  |  |  |
|  | Regeneration option |  |  | May be required depending on speed and work load．（Refer to page 14．） |  |  |  |  |  |
|  | Motor output［W］／Size［mm］ |  |  | 100／$\square 40$ |  |  | 200／口60 |  |  |
|  | Motor type |  |  | AC servo motor（100／200 VAC） |  |  |  |  |  |
|  | Encoder |  |  | Motor type S2，S3：Incremental 17－bit encoder（Resolution： 131072 p／rev） Motor type S6，S7：Absolute 18－bit encoder（Resolution： $262144 \mathrm{p} / \mathrm{rev}$ ） |  |  |  |  |  |
|  | Power consumption［W］${ }^{\text {Note 6）}}$ |  | Horizontal | 65 |  |  | 80 |  |  |
|  |  |  | Vertical | 165 |  |  | 235 |  |  |
|  | Standby power consumption when operating［W］Note 7） |  | Horizontal | 2 |  |  | 2 |  |  |
|  |  |  | Vertical | 10 |  |  | 12 |  |  |
|  | Max．instantaneous power consumption［W］Note 8） |  |  | 445 |  |  | 725 |  |  |
| － | Type Note 9） |  |  | Non－magnetizing lock |  |  |  |  |  |
| 氯： | Holding force［ N ］ |  |  | 67 | 101 | 203 | 220 | 330 | 660 |
| 或： | Power consumption at $20^{\circ} \mathrm{C}$［W］${ }^{\text {Note 10）}}$ |  |  | 6.3 |  |  | 7.9 |  |  |
|  | Rated voltage［V］ |  |  | $24 \mathrm{VDC}_{-10}{ }^{0} \%$ |  |  |  |  |  |

Note 1）Consult with SMC for non－standard strokes as they are produced as special orders．
Note 2）Check＂Speed－Work Load Graph（Guide）＂on page 14
Note 3）The allowable speed changes according to the stroke．
Note 4）A reference value for correcting an error in reciprocal operation．
Note 5）Impact resistance：No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw． （Test was performed with the actuator in the ini－ tial state．）
Vibration resistance：No malfunction occurred in a test ranging be－ tween 45 to 2000 Hz ．Test was performed in both an axial direction and a perpendicular di－ rection to the lead screw．（Test was performed with the actuator in the initial state．）

Note 6）The power consumption（including the driver）is for when the actua－ tor is operating．
Note 7）The standby power consumption when operating（including the driver）is for when the actuator is stopped in the set position during the operation．
Note 8）The maximum instantaneous power consumption（including the driver）is for when the actuator is operating．
Note 9）Only when motor option＂With lock＂is selected．
Note 10）For an actuator with lock，add the power consumption for the lock．
Note 11）Sensor magnet position is located in the table center．For detailed dimensions，refer to＂Auto Switch Mounting Position＂on page 43.
Note 12）Do not allow collisions at either end of the table traveling distance． Additionally，when running the positioning operation，do not set within 2 mm of both ends．
Note 13）For＂Manufacture of Intermediate Strokes＂，please contact SMC． （LEJS40／Manufacturable stroke range： 200 to 1200 mm ，LEJS63／ Manufacturable stroke range： 300 to 1500 mm ）

# Electric Actuator/High Rigidity Slider Type  

## Series 11-LEJS

## How to Order

$\left.\begin{array}{l}\text { 3 Motor type*1 } \\ \begin{array}{|c|c|c|c|c|}\hline \text { Symbol } & \text { Type } & \text { Output [W] } & \text { Actuator size } & \text { Compatible drivers*2 }\end{array} \\ \hline \text { S2 }\end{array} \begin{array}{c}\text { AC servo motor } \\ \text { (Incremental encoder) }\end{array}\right)$
(4) Lead [mm]

| Symbol | LEJS40 | LEJS63 |
| :---: | :---: | :---: |
| A | 16 | 20 |
| $\mathbf{B}$ | 8 | 10 |

(5) Stroke $[\mathrm{mm}]^{* 3}$

| 200 |
| :---: |
| to |
| 1500 |

*3: Refer to the table below for details.
*1: For motor type S 2 and S 6 , the compatible driver part number suffixes are S 1 and S 5 respectively. For motor type T6, the compatible driver part number suffix is T5. *2: For details of the drivers, refer to pages 50 and 65.

8 Cable type $* 6, * 7, * 8$

|  | Without cable |
| :---: | :---: |
| $\mathbf{S}$ | Standard cable |
| $\mathbf{R}$ | Robotic cable (Flexible cable) |

*6: When the driver type is selected, the cable is included. Select cable type and cable length. Example)
S2S2: Standard cable (2 m) + Driver (LECSS2)
S2: $\quad$ Standard cable ( 2 m )
-: Without cable and driver
*7: The motor and encoder cables are included. (The lock cable is also included when the motor with lock option is selected.)
*8: Standard cable entry direction is "(A) Axis side".

9 Cable length [m]*6,*9

| - | Without cable |
| :---: | :---: |
| $\mathbf{2}$ | 2 m |
| $\mathbf{5}$ | 5 m |
| $\mathbf{A}$ | 10 m |

*9: The length of the encoder, motor and lock cables are the same.
10 m

OStandard
Applicable stroke table*4
(10) Driver type ${ }^{6}$

|  | Compatible <br> drivers | Power supply <br> voltage (V) |
| :---: | :---: | :---: |
| A1 | Without driver | - |
| A2 | LECSA1-S $\square$ | 100 to 120 |
| B1 | LECSA2-S $\square$ | 200 to 230 |
| B2 | LECSB2-S $\square$ | 100 to 120 |
| C1 | LECSC1-S $\square$ | 200 to 230 |
| C2 | LECSC2-S $\square$ | 200 to 120 |
| S1 | LECSS1-S $\square$ | 100 to 120 |
| S2 | LECSS2-S $\square$ | 200 to 230 |
|  | LECSS2-T $\square$ | 200 to 240 |

## 11 I/O cable length [m]*10 | $\bar{H}$ | Without cable |
| :---: | :---: |
| $\mathbf{H}$ | Without cable (Connector only) |
| $\mathbf{1}$ | 1.5 |

*10: When "Without driver" is selected for driver type, only "-: Without cable" can be selected.
Refer to page 62 if I/O cable is required.
(Options are shown on page 62.)
*4: Consult with SMC for non-standard strokes as they are produced as special orders.

## Compatible Drivers

Note 1) Consult with SMC for non-standard strokes as they are produced as special orders.
Note 2) Refer to "Speed-Work Load Graph (Guide)" on page 14 for details.
Note 3) The allowable speed changes according to the stroke.
Note 4) A reference value for correcting an error in reciprocal operation
Note 5) Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz . Test was performed in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)
Note 6) The amount of particle generation changes according to the operating conditions and suction flow rate. Refer to the particle generation characteristics for details.

Note 7) The power consumption (including the driver) is for when the actuator is operating.
Note 8) The standby power consumption when operating (including the driver) is for when the actuator is stopped in the set position during the operation.
Note 9) The maximum instantaneous power consumption (including the driver) is for when the actuator is operating. This value can be used for the selection of the power supply.
Note 10) Only when motor option "With lock" is selected.
Note 11) For an actuator with lock, add the power consumption for the lock.
Note 12) Sensor magnet position is located in the table center. For detailed dimensions, refer to "Auto Switch Mounting Position" on page 43.
Note 13) Do not allow collisions at either end of the table traveling distance. Additionally, when running the positioning operation, do not set within 2 mm of both ends.
Note 14) For "Manufacture of Intermediate Strokes", please contact SMC (LEJS40/Manufacturable stroke range: 200 to 1200 mm, LEJS63/ Manufacturable stroke range: 300 to 1500 mm )

* Copper and zinc materials are used for the motors, cables, controllers/drivers.

## Handling

## $\triangle$ Caution

## Change of material

Series 25A- are copper- and zinc-free products, however, some parts including coils for motors, cables, drivers and auto switches, and connector pins and lead wires, whose material can not be changed, are made of copper.

## Chemical environment

Refrain from using the products in such environments as exposed to chemicals. Otherwise, resin parts may deteriorate. If you want SMC to test the products for the effects of chemicals attached to them, send the products back to SMC after thoroughly cleaning them. Consult your SMC sales representative for further details.

## Trademark

DeviceNet ${ }^{\text {TM }}$ is a trademark of ODVA.
EtherCAT ${ }^{\circledR}$ is registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany.

Note 1) Consult with SMC for non-standard strokes as they are produced as special orders.
Note 2) Check "Speed-Work Load Graph (Guide)" on page 14.
Note 3) A reference value for correcting an error in reciprocal operation.
Note 4) Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz . Test was performed in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)
Note 5) The power consumption (including the driver) is for when the actuator is operating.
Note 6) The standby power consumption when operating (including the driver) is for when the actuator is stopped in the set position during the operation.
Note 7) The maximum instantaneous power consumption (including the driver) is for when the actuator is operating.
Note 8) Only when motor option "With lock" is selected.
Note 9) For an actuator with lock, add the power consumption for the lock.
Note 10) Sensor magnet position is located in the table center.
For detailed dimensions, refer to "Auto Switch Mounting Position" on page 43.
Note 11) Do not allow collisions at either end of the table traveling distance. Additionally, when running the positioning operation, do not set within 2 mm of both ends.
Note 12) For "Manufacture of Intermediate Strokes", please contact SMC.
(LEJB40/Manufacturable stroke range: 200 to 2000 mm , LEJB63/Manufacturable stroke range: 300 to 3000 mm )

## Auto Switch Mounting Position

| Model | Size | A | B | C | Operating range |
| :---: | :---: | :---: | :---: | :---: | :---: |
| LEJS | 40 | 77 | 80 | 160 | 5.5 |
| LEJB |  |  |  |  | 5.0 |
| LEJS | 63 | 83 | 86 | 172 | 7.0 |
| LEJB |  |  |  |  | 6.5 |

Note) The operating range is a guideline including hysteresis, not meant to be guaranteed. There may be large variations (as much as $\pm 30 \%$ ) depending on the ambient environment.

## Auto Switch Mounting

When mounting the auto switches, they should be inserted into the actuator's auto switches mounting groove from the direction shown in the drawing on the below. Once in the mounting position, use a flat head watchmaker's screwdriver to tighten the included auto switch mounting screw.

Auto Switch Mounting Screw Tightening Torque [ $\mathrm{N} \cdot \mathrm{m}$ ]

| Auto switch model | Tightening torque |
| :---: | :---: |
| $\mathbf{D}-\mathbf{M 9} \square \mathbf{( V )}$ <br> $\mathbf{D}-\mathbf{M 9} \square \mathbf{W}(\mathbf{V})$ | 0.10 to 0.15 |

Note) When tightening the auto switch mounting screw, use a watchmaker's screwdriver with a handle diameter of about 5 to 6 mm .

## Solid State Auto Switch Direct Mounting Style D-M9N(V)/D-M9P(V)/D-M9B(V) C €

## Grommet

- 2-wire load current is reduced ( 2.5 to 40 mA ).
- Flexibility is 1.5 times greater than the conventional model (SMC comparison).
- Using flexible cable as standard.

## ©Caution

## Precautions

Fix the auto switch with the existing screw installed on the auto switch body. The auto switch may be damaged if a screw other than the one supplied is used.

Auto Switch Specifications

Refer to SMC website for the details about products conforming to the international standards.

# Series LEJ <br> Electric Actuator/ Specific Product Precautions 1 

Be sure to read before handling. Refer to back cover for Safety Instructions. For Electric Actuator Precautions, refer to "Handling Precautions for SMC Products" and the Operation Manual on SMC website, http://www.smc.eu

## Design

## © Caution

1. Do not apply a load in excess of the operating limit.

Select a suitable actuator by work load and allowable moment. If the product is used outside of the operating limit, the eccentric load applied to the guide will be excessive and have adverse effects such as creating play on the guide, degrading accuracy and shortening the life of the product.
2. Do not use the product in applications where excessive external force or impact force is applied to it.
The product can be damaged.
The components including the motor are manufactured to precise tolerances. So that even a slight deformation may cause a malfunction or seizure.

## Selection

## $\triangle$ Warning

1. Do not increase the speed in excess of the specification limits.

Select a suitable actuator by the relationship of the allowable work load and speed, and the allowable speed of each stroke. If the product is used outside of the specification limits, it will have adverse effects such as creating noise, degrading accuracy and shortening the life of the product.
2. When the product repeatedly cycles with partial strokes ( 100 mm or less), lubrication can run out. Operate it at a full stroke at least once a day or every a thousand cycles.
3. When external force is applied to the table, it is necessary to add external force to the work load as the total carried load for the sizing.
When a cable duct or flexible moving tube is attached to the actuator, the sliding resistance of the table increases and may lead to operational failure of the product.

## Handling

## © Caution

1. Do not allow the table to hit the end of stroke.

When incorrect instructions are inputted, such as using the product outside of the operating limit or operation outside of actual stroke through changes in the controller/driver setting and/or origin position, the table may collide against the stroke end of the actuator. Please check these points before use.
If the table collides against the stroke end of the actuator, the guide, belt or internal stopper can be broken. This may lead to abnormal operation.

Handle the actuator with care when it is used in the vertical direction as the workpiece will fall freely from its own weight.
2. The actual speed of this actuator is affected by the work load and stroke.
Check specifications with reference to the model selection section of the catalogue.
3. Do not apply a load, impact or resistance in addition to the transferred load during return to origin.
4. Do not dent, scratch or cause other damage to the body and table mounting surfaces.

This may cause unevenness in the mounting surface, play in the guide or an increase in the sliding resistance.
5. Do not apply strong impact or an excessive moment while mounting the product or a workpiece.
If an external force over the allowable moment is applied, it may cause play in the guide or an increase in the sliding resistance.
6. The flatness of mounting surface should be within $0.1 \mathrm{~mm} / 500 \mathrm{~mm}$.

Unevenness of a workpiece or base mounted on the body of the product may cause play in the guide and an increase in the sliding resistance.
In the case of overhang mounting (including cantilever), to avoid deflection of the actuator body, use a support plate or support guide.
7. When mounting the actuator, use all mounting holes.
If all mounting holes are not used, it influences the specifications, e.g., the amount of displacement of the table increases.
8. Do not hit the table with the workpiece in the positioning operation and positioning range.
9. Do not apply external force to the dust seal band.

Particularly during the transportation.

# Series LEJ <br> <br> Electric Actuator/ <br> <br> Electric Actuator/ Specific Product Precautions 2 

 Specific Product Precautions 2}

Be sure to read before handling. Refer to back cover for Safety Instructions. For Electric Actuator Precautions, refer to "Handling Precautions for SMC Products" and the Operation Manual on SMC website, http://www.smc.eu

## Handling

## © Caution

10. When mounting the product, use screws with adequate length and tighten them with adequate torque.

Tightening the screws with a higher torque than recommended may cause a malfunction, whilst the tightening with a lower torque can cause the displacement of the mounting position or in extreme conditions the actuator could become detached from its mounting position.

To prevent the workpiece fixing bolts from touching the body, use bolts that are 0.5 mm or shorter than the maximum screw-in depth. If long bolts are used, they can touch the body and cause a malfunction, etc.
11. Do not operate by fixing the table and moving the actuator body.
12. The belt drive actuator cannot be used vertically for applications.
13. Vibration may occur during operation, this could be caused by the operating conditions.
If it occurs, adjust response value of auto tuning of driver to be lower.
During the first auto tuning noise may occur, the noise will stop when the tuning is complete.
14. When mounting the actuator using the body mounting reference plane, use a pin. Set the height of the pin to be 5 mm or more because of chamfering. (Recommended height 6 mm )

## Maintenance

## © Warning

## Maintenance frequency

Perform maintenance according to the table below.

| Frequency | Appearance check | Internal check | Belt check |
| :--- | :---: | :---: | :---: |
| Inspection before <br> daily operation | $\bigcirc$ | - | - |
| Inspection every <br> 6 months $/ 1000 \mathrm{~km} /$ <br> 5 million cycles* | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |

* Select whichever comes sooner.
- Items for visual appearance check

1. Loose set screws, Abnormal dirt
2. Check of flaw and cable joint
3. Vibration, Noise

- Items for internal check

1. Lubricant condition on moving parts.

* For lubrication, use lithium grease No. 2.

2. Loose or mechanical play in fixed parts or fixing screws.

- Items for belt check

Stop operation immediately and replace the belt when belt appear to be below. Further, ensure your operating environment and conditions satisfy the requirements specified for the product.
a. Tooth shape canvas is worn out.

Canvas fiber becomes fuzzy. Rubber is removed and the fiber becomes whitish. Lines of fibers become unclear.
b. Peeling off or wearing of the side of the belt

Belt corner becomes round and frayed thread sticks out.
c. Belt partially cut

Belt is partially cut. Foreign matter caught in teeth other than cut part causes flaw.
d. Vertical line of belt teeth

Flaw which is made when the belt runs on the flange.
e. Rubber back of the belt is softened and sticky.
f. Crack on the back of the belt

| Motor capacity | $100 / 200 / 400 \mathrm{~W}$ |

## Series LECSA (Pulse input type/Positioning type)

- Up to 7 positioning points by point table
- Input type: Pulse input
- Control encoder: Incremental 17-bit encoder (Resolution: 131072 pulse/rev)
- Parallel input: 6 inputs output: 4 outputs

- Input type: Pulse input
- Control encoder: Absolute 18-bit encoder (Resolution: 262144 pulse/rev)
- Parallel input: 10 inputs
output: 6 outputs

## Series LECSC (CC-Link direct input type)

- Position data/speed data setting and operation start/stop
- Positioning by up to 255 point tables (when 2 stations occupied)
- Up to 32 drivers connectable (when 2 stations occupied) with CC-Link communication
- Applicable Fieldbus protocol: CC-Link (Ver. 1.10, max. communication speed: 10 Mbps )
- Control encoder: Absolute 18-bit encoder (Resolution: 262144 pulse/rev)

## Series LECSS (SSCNET III type)

- Compatible with Mitsubishi Electric's servo system controller network
- Reduced wiring and SSCNET III optical cable for one-touch connection
- SSCNET III optical cable provides enhanced noise resistance
- Up to 16 drivers connectable with SSCNET III communication
- Applicable Fieldbus protocol: SSCNET III
(High-speed optical communication, max. one-way communication speed: 100 Mbps )
- Control encoder: Absolute 18-bit encoder (Resolution: 262144 pulse/rev)

|  | Rated current [ A ] |  | 0.4 |  | 0.2 |  |  |
| Communication specifications | Applicable Fieldbus protocol (Version) |  | CC-Link communication (Ver. 1.10) |  |  |  |  |
|  | Connection cable |  | CC-Link Ver. 1.10 compliant cable (Shielded 3-core twisted pair cable)*1 |  |  |  |  |
|  | Remote station number |  | 1 to 64 |  |  |  |  |
|  | Cable length | Communication speed [bps] | 16 k | 625 k | 2.5 M | 5 M | 10 M |
|  |  | Maximum overall cable length [ m ] | 1200 | 900 | 400 | 160 | 100 |
|  |  | Cable length between stations [ m ] | 0.2 or more |  |  |  |  |
|  | I/O occupation area (Inputs/Outputs) |  | 1 station occupied (Remote I/O 32 points/32 points)/(Remote register 4 words/4 words) 2 stations occupied (Remote I/O 64 points/ 64 points)/(Remote register 8 words/8 words) |  |  |  |  |
|  | Number of connectable drivers |  | Up to 42 (when 1 station is occupied by 1 driver), Up to 32 (when 2 stations are occupied by 1 driver), when there are only remote device stations. |  |  |  |  |
| Command method | Remot | ster input | Available with CC-Link communication (2 stations occupied) |  |  |  |  |
|  | Point table No. input |  | Available with CC-Link communication, RS422 communication CC-Link communication (1 station occupied): 31 points CC-Link communication (2 stations occupied): 255 points RS422 communication: 255 points |  |  |  |  |
|  | Indexer positioning input |  | Available with CC-Link communication CC-Link communication (1 station occupied): 31 points CC-Link communication (2 stations occupied): 255 points |  |  |  |  |
| Communication function |  |  | USB communication, RS-422 communication*2 |  |  |  |  |
| Operating temperature range [ ${ }^{\circ} \mathrm{C}$ ] |  |  | 0 to 55 (No freezing) |  |  |  |  |
| Operating humidity range [\%RH] |  |  | 90 or less (No condensation) |  |  |  |  |
| Storage temperature range [ ${ }^{\circ} \mathrm{C}$ ] |  |  | -20 to 65 (No freezing) |  |  |  |  |
| Storage humidity range [\%RH] |  |  | 90 or less (No condensation) |  |  |  |  |
| Insulation resistance [ $\mathrm{M} \Omega$ ] |  |  | Between the housing and SG: 10 (500 VDC) |  |  |  |  |
| Weight [g] |  |  | 800 |  |  |  | 1000 |

*1 If the system comprises of both CC-Link Ver. 1.00 and Ver. 1.10 compliant cables, Ver. 1.00 specifications are applied to the overall cable length and the cable length between stations. *2 USB communication and RS422 communication cannot be performed at the same time.

## Series LECSS

## LECSA $\square-\square$

Main Circuit Power Supply Connector: CNP1 * Accessory

| Terminal name | Function | Details |
| :---: | :---: | :---: |
| $\dagger$ | Protective earth (PE) | Should be grounded by connecting the servo motor's earth terminal and the control panel's protective earth (PE). |
| L1 | Main circuit power supply | Connect the main circuit power supply. <br> LECSA1: Single phase 100 to 120 VAC, 50 / 60 Hz <br> LECSA2: Single phase 200 to 230 VAC, 50 / 60 Hz |
| L2 |  |  |
| P | Regeneration option | Terminal to connect regeneration option <br> LECSA $\square$-S1: Not connected at time of shipping. <br> LECSA $\square$-S3, S4: Connected at time of shipping. <br> * If regeneration option is required for "Model Selection", connect to this terminal. |
| C |  |  |
| U | Servo motor power (U) | Connect to motor cable (U, V, W). |
| V | Servo motor power (V) |  |
| W | Servo motor power (W) |  |

## Power Supply Wiring Example: LECSB, LECSC, LECSS

## LECSB1- $\square$ LECSC1- $\square$ LECSS1-

LECSB2- $\square$
LECSC2- $\square$
LECSS2-

For single phase 200 VAC

For three phase 200 VAC

Note) For single phase 200 to 230 VAC, power supply should be connected to L1 and L2 terminals, with nothing connected to L3.

Main Circuit Power Supply Connector: CNP1 * Accessory

| Termina name | Function | Details |
| :---: | :---: | :---: |
| L1 | Main circuit power supply | Connect the main circuit power supply. <br> LECSB1/LECSC1/LECSS1: Single phase 100 to 120 VAC, $50 / 60 \mathrm{~Hz}$ Connection terminal: L1,L2 LECSB2/LECSC2/LECSS2: Single phase 200 to 230 VAC, $50 / 60 \mathrm{~Hz}$ Connection terminal: L1,L2 Three phase 200 to 230 VAC, 50 / 60 Hz Connection terminal: L1,L2,L3 |
| L2 |  |  |
| L3 |  |  |
| N | Do not connect. |  |
| P1 | Connect between $\mathrm{P}_{1}$ and $\mathrm{P}_{2}$. (Connected at time of shipping.) |  |
| P2 |  |  |  |

Control Circuit Power Supply Connector: CNP2 * Accessory

| Terminal name | Function | Details |
| :---: | :---: | :---: |
| P | Regeneration option | Connect between P and D . (Connected at time of shipping.) <br> * If regeneration option is required for "Model Selection", connect to this terminal. |
| C |  |  |
| D |  |  |
| L11 | Control circuit power supply | Connect the control circuit power supply. <br> LECSB1/LECSC1/LECSS1: Single phase 100 to 120 VAC, $50 / 60 \mathrm{~Hz}$ Connection terminal: L11,L21 LECSB2/LECSC2/LECSS2: Single phase 200 to 230 VAC, $50 / 60 \mathrm{~Hz}$ Connection terminal: L11,L21 Three phase 200 to 230 VAC, 50 / 60 Hz Connection terminal: L11, L21 |
|  |  |  |
| L21 |  |  |

Motor Connector: CNP3 * Accessory

| Terminal name | Function |  |
| :---: | :---: | :---: |
| U | Servo motor power (U) |  |
| V | Servo motor power (V) | Connect to motor cable (U, V, W) |
| W | Servo motor power (W) |  |

LECSB

## Control Signal Wiring Example: LECSA

This wiring example shows connection with a PLC (FX3U- $\square$ MT/ES) manufactured by Mitsubishi Electric as when used in position control mode. Refer to the LECSA operation manual and any technical literature or operation manuals for your PLC and positioning unit before connecting to another PLC or positioning unit.

Note 1) For preventing electric shock, be sure to connect the driver circuit power supply connector (CNP1)'s protective earth (PE) terminal (marked $\Theta$ ) to the control panel's protective earth (PE).
Note 2) For interface use, supply $24 \mathrm{VDC} \pm 10 \% 200 \mathrm{~mA}$ using an external source. 200 mA is the value when all I/O command signals are used and reducing the number of inputs/outputs can decrease current capacity. Refer to "Operation Manual" for required current for interface.
Note 3) The failure (ALM) is ON during normal conditions. When it is OFF (alarm occurs), stop the sequencer signal using the sequence program.
Note 4) The same name signals are connected inside the driver.
Note 5) For command pulse input with an open collector method. When a positioning unit loaded with a differential line driver method is used, it is 10 m or less. Note 6) If the command pulse train input is open collector method, it supports only to the sink (NPN) type interface. It does not correspond to the source (PNP) type interface.

## Control Signal Wiring Example: LECSB

This wiring example shows connection with a positioning unit (QD75D) manufactured by Mitsubishi Electric as when used in position control mode. Refer to the LECSB operation manual and any technical literature or operation manuals for your PLC and positioning unit before connecting to another PLC or positioning unit.

Note 1) For preventing electric shock, be sure to connect the driver's protective earth (PE) terminal (marked $\Theta$ ) to the control panel's protective earth (PE).
Note 2) For interface use, supply 24 VDC $\pm 10 \% 300 \mathrm{~mA}$ using an external source.
Note 3) The failure (ALM) is ON during normal conditions. When it is OFF (alarm occurs), stop the sequencer signal using the sequence program.
Note 4) The same name signals are connected inside the driver.
Note 5) For command pulse input with a differential line driver method. For open collector method, it is 2 m or less.
Note 6) If the command pulse train input is open collector method, it supports only to the sink (NPN) type interface. It does not correspond to the source (PNP) type interface.

## Series LECS $\square$

Control Signal Wiring Example: LECSC

Note 1) For preventing electric shock, be sure to connect the driver's protective earth (PE) terminal (marked $\Theta$ ) to the control panel's protective earth (PE). Note 2) For interface use, supply 24 VDC $\pm 10 \% 150 \mathrm{~mA}$ using an external source.
Note 3) The failure (ALM) is ON during normal conditions. When it is OFF (alarm occurs), stop the sequencer signal using the sequence program.

Control Signal Wiring Example: LECSS

Note 6) Connections from Axis 2 onward are omitted.
Note 7) Up to 16 axes can be set.
Note 8) Be sure to place a cap on unused CN1A/CN1B.

# Ac Servo Motor Driver Series LECSS-T 

## Options

## Battery (only for LECSS2-T $\square$ )

## LEC-MR - BAT6V1SET

* MR-BAT6V1SET manufactured by Mitsubishi Electric Corporation.

Battery for replacement.
Absolute position data is maintained by installing the battery to the driver.

## USB cable (3 m)

## LEC - MR - J3USB

* MR-J3USB manufactured by Mitsubishi Electric Corporation.

Cable for connecting PC and driver when using the setup software (MR Configurator2 ${ }^{\text {TM }}$ ).
Do not use any cable other than this cable.

## STO cable ( 3 m )

## LEC - MR - D05UDL3M

* MR-D05UDL3M manufactured by Mitsubishi Electric Corporation.

Cable for connecting the driver and device, when using the safety function.
Do not use any cable other than this cable.

Note) The LEC-MR-BAT6V1SET is an assembled battery that uses lithium metal battery 2CR17335A. When transporting lithium metal batteries and devices with built-in lithium metal batteries by a method subject to UN regulations, it is necessary to apply measures according to the regulations stipulated in the United Nations Recommendations on the Transport of Dangerous Goods, the Technical Instructions (ICAO-TI) of the International Civil Aviation Organization (ICAO), and the International Maritime Dangerous Goods Code (IMDG CODE) of the International Maritime Organization (IMO). If a customer is transporting products such as shown above, it is necessary to confirm the latest regulations, or the laws and regulations of the country of transport on your own, in order to apply the proper measures. Please contact SMC sales representative for details.

## Design/Selection

## $\triangle$ Warning

1. Use the specified voltage.

If the applied voltage is higher than the specified voltage, malfunction and damage to the driver may result. If the applied voltage is lower than the specified voltage, there is a possibility that the load cannot be moved due to internal voltage drop. Check the operating voltage prior to start. Also, confirm that the operating voltage does not drop below the specified voltage during operation.
2. Do not use the products outside the specifications.

Otherwise, fire, malfunction or damage to the driver/actuator can result. Check the specifications prior to use.
3. Install an emergency stop circuit.

Install an emergency stop outside the enclosure in easy reach to the operator so that the operator can stop the system operation immediately and intercept the power supply.
4. To prevent danger and damage due to a breakdown or malfunction of these products, which may occur at a certain probability, a backup system should be arranged in advance by using a multiple-layered structure or by making a fail-safe equipment design, etc.
5. If there is a risk of fire or personal injury due to abnormal heat generation, sparking, smoke generated by the product, etc., cut off the power supply from this product and the system immediately.
6. The parameters of the driver are set to initial values. Please change parameters according to the specifications of the customer's equipment before use.
Refer to the operation manual for details of parameters.

## Handling

## $\triangle$ Warning

1. Never touch the inside of the driver and its peripheral devices.
Otherwise, electric shock or failure can result.
2. Do not operate or set up this equipment with wet hands. Otherwise, electric shock can result.
3. Do not use a product that is damaged or missing any components.
Electric shock, fire or injury can result.
4. Use only the specified combination between the electric actuator and driver.
Otherwise, it may cause damage to the driver or to the other equipment.
5. Be careful not to touch, get caught or hit by the workpiece while the actuator is moving.
An injury can result.
6. Do not connect the power supply or power up the product until it is confirmed that the workpiece can be moved safely within the area that can be reached by the workpiece.
Otherwise, the movement of the workpiece may cause an accident.
7. Do not touch the product when it is energized and for some time after the power has been disconnected, as it is very hot.
Otherwise, it may cause burns due to the high temperature.
8. Check the voltage using a tester at least 5 minutes after power-off when performing installation, wiring and maintenance.
Otherwise, electric shock, fire or injury can result.

## Handling

## $\triangle$ Warning

9. Static electricity may cause a malfunction or damage the driver. Do not touch the driver while power is supplied to it.
Take sufficient safety measures to eliminate static electricity when it is necessary to touch the driver for maintenance.
10. Do not use the products in an area where they could be exposed to dust, metallic powder, machining chips or splashes of water, oil or chemicals.
Otherwise, a failure or malfunction can result.
11. Do not use the products in a magnetic field.

Otherwise, a malfunction or failure can result.
12. Do not use the products in an environment where flammable, explosive or corrosive gases, liquids or other substances are present.
Otherwise, fire, explosion or corrosion can result.
13. Avoid heat radiation from strong heat sources, such as direct sunlight or a hot furnace.
Otherwise, it will cause a failure to the driver or its peripheral devices.
14. Do not use the products in an environment with cyclic temperature changes.
Otherwise, it will cause a failure to the driver or its peripheral devices.
15. Do not use the products in an environment where surges are generated.
Devices (solenoid type lifters, high frequency induction furnaces, motors, etc.) that generate a large amount of surge around the product may lead to deterioration or damage to the internal circuits of the products. Avoid supplies of surge generation and crossed lines.
16. Do not install these products in a place subject to vibration and impact.
Otherwise, a malfunction or failure can result.
17. When a surge generating load such as a relay or solenoid valve is directly driven, use a product that incorporates a surge absorption element.

## Mounting

## © Warning

1. Install the driver and its peripheral devices on fireproof material.
Direct installation on or near flammable material may cause fire.
2. Do not install these products in a place subject to vibration and impact.
Otherwise, a malfunction or failure can result.
3. The driver should be mounted on a vertical wall in a vertical direction.
Also, do not cover the driver's suction/exhaust ports.
4. Install the driver and its peripheral devices on a flat surface.
If the mounting surface is not flat or uneven, excessive force may be applied to the housing and other parts resulting in a malfunction.

Series LECS $\square$

## Specific Product Precautions 2

## Be sure to read before handling. Refer to back cover for Safety Instructions. For Electric Actuator Precautions, refer to "Handling Precautions for SMC Products" and the Operation Manual on SMC website, http://www.smc.eu

## Power Supply

## $\triangle$ Caution

1. Use a power supply with low noise between lines and between power and ground.
In cases where noise is high, use an isolation transformer.
2. Take appropriate measures to prevent surges from lightning. Ground the surge absorber for lightning separately from the grounding of the driver and its peripheral devices.

## Wiring

## © Warning

1. The driver will be damaged if a commercial power supply ( $100 \mathrm{~V} / 200 \mathrm{~V}$ ) is added to the driver's servo motor power (U, V, W). Be sure to check wiring such as wiring mistakes when the power supply is turned on.
2. Connect the ends of the U, V, W wires from the motor cable correctly to the phases ( $\mathrm{U}, \mathrm{V}, \mathrm{W}$ ) of the servo motor power. If these wires do not match up, it is unable to control the servo motor.

## Grounding

## © Warning

1. For grounding actuator, connect the copper wire of the actuator to the driver's protective earth (PE) terminal and connect the copper wire of the driver to the earth via the control panel's protective earth (PE) terminal. Do not connect them directly to the control panel's protective earth (PE) terminal.

2. In the unlikely event that malfunction is caused by the ground, it may be disconnected.

## Maintenance

## © Warning

1. Perform maintenance checks periodically.

Confirm wiring and screws are not loose.
Loose screws or wires may cause unexpected malfunction.
2. Conduct an appropriate functional inspection and test after completed maintenance.
In case of any abnormalities (if the actuator does not move or the equipment does not operate properly, etc.), stop the operation of the system.
Otherwise, unexpected malfunction may occur and safety cannot be assured
Conduct a test of the emergency stop to confirm the safety of the equipment.
3. Do not disassemble, modify or repair the driver or its peripheral devices.
4. Do not put anything conductive or flammable inside the driver.
Otherwise, fire can result.
5. Do not conduct an insulation resistance test or insulation withstand voltage test.
6. Reserve sufficient space for maintenance.

Design the system so that it allows required space for maintenance.

# MECHATROLINK Compatible AC Servo Motor Driver 

( $\epsilon$

Power supply voltage (V) 200 to 230 VAC

Motor capacity (W) 100/200/400

- Position control, speed control and torque control can be used.
- Control encoder: Absolute 20-bit encoder (Resolution: $1048576 \mathrm{p} / \mathrm{rev}$ )

## CMECHATROLINK-I Type

- Applicable Fieldbus protocol: MMECHATROLINK-II
- Number of connectable drivers: 30 units
(Transmission distance: Max. 50 m in total)

## TMMECHATROLINK-III Type

## Series LECYU

- Applicable Fieldbus protocol: MMECHATROLINK-III
- Number of connectable drivers: 62 units
(Transmission distance: Max. 75 m between stations)

Compatible Actuators

AC Servo Motor Driver Series LECYM/LECYU

## Selection Procedure <br> Selection Procedure

全

## Selection Example

Operating conditions

- Work load: 60 [kg]
- Workpiece mounting condition:
- Speed: 300 [mm/s]
- Acceleration/Deceleration: 3000 [mm/s²]
- Stroke: 300 [mm]
- Mounting orientation: Horizontal
- External force: 10 [ N ]

Check the speed-work load.
Select the product by referring to "Speed-Work Load Graph" (Page 80).
Selection example) The LEJS63V7B-300 is temporarily selected based on the graph shown on the right side.
The regenerative resistor may be necessary.
Refer to page 80 for "Conditions for Regenerative Resistor (Guide)".

## Step 2 Check the cycle time.

Refer to method 1 for a rough estimate, and method 2 for a more precise value.
Method 1: Check the cycle time graph (Pages 81 and 82)
The graph is based on the maximum speed of each size.

## Method 2: Calculation

Cycle time $T$ can be found from the following equation.
$\mathrm{T}=\mathrm{T} 1+\mathrm{T} 2+\mathrm{T} 3+\mathrm{T} 4[\mathrm{~s}]$

- T1 and T3 can be obtained by the following equation.

$$
\mathrm{T} 1=\mathrm{V} / \mathrm{a} 1[\mathrm{~s}] \quad \mathrm{T} 3=\mathrm{V} / \mathrm{a} 2[\mathrm{~s}]
$$

The acceleration and deceleration values have upper limits depending on the workpiece mass and the duty ratio.
Check that they do not exceed the upper limit, by referring to "Work load-Acceleration/Deceleration Graph (Guide)" (Pages 83 to 85 ).
For the ball screw type, there is an upper limit of the speed depending on the stroke. Check that if it does not exceed the upper limit, by referring to the specifications (Page 91).

- T2 can be found from the following equation.

$$
\mathrm{T} 2=\frac{\mathrm{L}-0.5 \cdot \mathrm{~V} \cdot(\mathrm{~T} 1+\mathrm{T} 3)}{\mathrm{V}}[\mathrm{~s}]
$$

- T4 varies depending on the motor type and load. The value below is recommended. T4 $=0.05$ [s]

Calculation example) T1 to T4 can be calculated as follows.
$\mathrm{T} 1=\mathrm{V} / \mathrm{a} 1=300 / 3000=0.1[\mathrm{~s}]$,
$\mathrm{T} 3=\mathrm{V} / \mathrm{a} 2=300 / 3000=0.1[\mathrm{~s}]$
$\mathrm{T} 2=\frac{\mathrm{L}-0.5 \cdot \mathrm{~V} \cdot(\mathrm{~T} 1+\mathrm{T} 3)}{\mathrm{V}}$
$=\frac{300-0.5 \cdot 300 \cdot(0.1+0.1)}{300}$
$=0.90$ [s]
T4 $=0.05$ [s]
Therefore, the cycle time can be obtained as follows.
$\mathrm{T}=\mathrm{T} 1+\mathrm{T} 2+\mathrm{T} 3+\mathrm{T} 4$
$=0.1+0.90+0.1+0.05$
$=1.15$ [ s ]

## Step 3 Check the allowable moment.

Refer to "Dynamic Allowable Moment" graphs (Pages 86 and 88).

Selection example) Select the LEJS63V7B-300 from the graph on the right side. Confirm that the external force is 20 [ N ] or less.
(The external force is the resistance due to cable duct, flexible trunking or air tubing.)

<Speed-Work load graph>
(LEJS63)

L : Stroke [mm]
V : Speed [mm/s]
a1: Acceleration $\left[\mathrm{mm} / \mathrm{s}^{2}\right]$
a2: Deceleration $\left[\mathrm{mm} / \mathrm{s}^{2}\right]$
T1: Acceleration time [s]
Time until reaching the set speed
T2: Constant speed time [s]
Time while the actuator is operating at a constant speed
T3: Deceleration time [s]
Time fom the begining of ith c constant speed operation to stop
T4: Settling time [s]
Time until in position is completed
T5: Resting time [s]
Time the product is not running
T6: Total time [s]
Total time from T1 to T5
Duty ratio: Ratio of T to T6
$T \div T 6 \times 100$

* This graph shows the amount of allowable overhang (guide unit) when the centre of gravity of the workpiece overhangs in one direction. When selecting the overhang, refer to "Calculation of Guide Load Factor" or the Electric Actuator Selection Software for confirmation, http://www.smc.eu

## Dynamic Allowable Moment

## Series LEJ

AC Servo Motor

## Dynamic Allowable Moment

* This graph shows the amount of allowable overhang (guide unit) when the centre of gravity of the workpiece overhangs in one direction. When selecting the overhang, refer to "Calculation of Guide Load Factor" or the Electric Actuator Selection Software for confirmation, http://www.smc.eu

## Calculation of Guide Load Factor

1. Decide operating conditions.

Model: LEJS/LEJB
Size: 40/63
Mounting orientation: Horizontal/Bottom/Wall/Vertical
Acceleration [mm/s²]: a
Work load [kg]: m
Work load centre position [mm]: Xc/Yc/Zc
2. Select the target graph with reference to the model, size and mounting orientation.
3. Based on the acceleration and work load, obtain the overhang [mm]: Lx/Ly/Lz from the graph.
4. Calculate the load factor for each direction.
$\alpha x=X c / L x, \alpha y=Y c / L y, \alpha z=Z c / L z$
5. Confirm the total of $\alpha \mathbf{x}, \alpha \mathbf{y}$ and $\alpha \mathbf{z}$ is 1 or less.
$\alpha \mathbf{x}+\alpha \mathbf{y}+\alpha \mathbf{z} \leq 1$
When 1 is exceeded, please consider a reduction of acceleration and work load, or a change of the work load centre position and series.

## Example

3. $\mathrm{Lx}=\mathbf{2 2 0} \mathbf{~ m m}, \mathrm{Ly}=\mathbf{2 1 0} \mathbf{~ m m}, \mathrm{Lz}=\mathbf{4 3 0} \mathbf{~ m m}$
4. The load factor for each direction can be obtained as follows.

$$
\begin{aligned}
& \alpha x=0 / 220=0 \\
& \alpha y=50 / 210=0.24 \\
& \alpha z=200 / 430=0.47 \\
& \text { 5. } \alpha x+\alpha y+\alpha z=0.71 \leq 1
\end{aligned}
$$

Note 1) Please consult with SMC for non-standard strokes as they are produced as special orders.
Note 2) Check "Speed-Work Load Graph (Guide)" on page 80.
Note 3) The allowable speed changes according to the stroke.
Note 4) A reference value for correcting an error in reciprocal operation.
Note 5) Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz . Test was performed in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)

Note 6) The power consumption (including the driver) is for when the actuator is operating.
Note 7) The standby power consumption when operating (including the driver) is for when the actuator is stopped in the set position during the operation.
Note 8) The maximum instantaneous power consumption (including the driver) is for when the actuator is operating.
Note 9) Only when motor option "With lock" is selected.
Note 10) For an actuator with lock, add the power consumption for the lock.
Note 11) Sensor magnet position is located in the table centre. For detailed dimensions, refer to "Auto Switch Mounting Position".
Note 12) Do not allow collisions at either end of the table traveling distance. Additionally, when running the positioning operation, do not set within 2 mm of both ends.
Note 13) For the manufacture of intermediate strokes, please contact SMC. (LEJS40/Manufacturable stroke range: 200 to 1200 mm, LEJS63/ Manufacturable stroke range: 300 to 1500 mm )

## How to Order

## 

Motor type *1

| Symbol | Type | Output <br> [W] | Actuator <br> size | Compatible <br> driver |
| :---: | :---: | :---: | :---: | :---: |
| V6 | AC servo motor <br> (Absolute encoder) | 100 | 40 | LECYM2-V5 <br> LECYU2-V5 |
| V7 | AC servo motor <br> (Absolute encoder) | 200 | 63 | LECYM2-V7 <br> LECYU2-V7 |

*1: For motor type V6, the compatible driver part number suffix is V 5 .

B $\quad$ With lock

| - | Without cable |
| :---: | :---: |
| $\mathbf{S}$ | Standard cable |
| $\mathbf{R}$ | Robotic cable (Flexible cable) |

*5: The motor and encoder cables are included. (The lock cable is included when the motor with lock option is selected.)
*4: When the driver type is selected, the cable is included. Select cable type and cable length.
Cable length [m] ${ }^{* 4, * 6}$

| $\mathbf{3}$ | Without cable |
| :---: | :---: |
| $\mathbf{5}$ | 3 m |
| $\mathbf{A}$ | 5 m |
| $\mathbf{C}$ | 10 m |

*6: The length of the motor, encoder and lock cables are the same.

| 8 Driver type ${ }^{* 4}$ |  |
| :---: | :---: |
|  | Compatible driver Power supply voltage [V] |
| M2 | Without driver |
| M2 | LECYM2-VD |
| U2 | LECYU2-V |

9) I/O cable length [m] ${ }^{* 7}$

|  | Without cable |
| :---: | :---: |
| $\mathbf{H}$ | Without cable ( Connector only) |
| $\mathbf{1}$ | 1.5 |

*7 When "Without driver" is selected for driver type, only "-: Without cable" can be selected.
Refer to Page 114 if I/O cable is required.
(Options are shown on Page 114.)

Applicable Stroke Table *3

| ModelStroke <br> $[\mathrm{mm}]$ | 200 | 300 | 400 | 500 | 600 | 700 | 800 | 900 | 1000 | 1200 | 1500 | 2000 | 3000 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| LEJB40 | - | $\bigcirc$ | $\bigcirc$ | - | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | - | - | - | - | - | - |
| LEJB63 | - | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | - | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |

For auto switches, refer to pages 41 to 43.
*3: Please consult with SMC for non-standard strokes as they are produced as special orders.

## Compatible Drivers

| Driver type | MMECHATROLINK-II type | MMECHATROLINK-III type |  |
| :---: | :---: | :---: | :---: |
| Series | LECYM |  |  |
| Applicable network | MECHATROLINK-II | MECHA | INK-III |
| Control encoder | Absolute 20-bit encoder |  |  |
| Communication device | USB communication, RS-422 communication |  |  |
| Power supply voltage [V] | 200 to 230 VAC ( $50 / 60 \mathrm{~Hz}$ ) |  |  |
| Reference page | Page 107 |  |  |

## Specifications

## AC Servo Motor

| Model |  |  | LEJB40V6 | LEJB63V7 |

|  | Work load [kg] | Horizontal | 20 (If the stroke exceeds 1000 mm : 10) | 30 |
|  | Speed [mm/s] Note 2) |  | 2000 | 3000 |
|  | Max. acceleration/deceleration [mm/s ${ }^{2}$ ] |  | 20000 (Refer to page 85 for li | work load and duty ratio.) |
|  | Positioning repeatability [mm] |  | $\pm 0.04$ |  |
|  | Lost motion [mm] Note 3) |  | 0.1 or less |  |
|  | Lead [mm] |  | 27 | 42 |
|  | Impact/Vibration resistance [m/s ${ }^{2}$ ] Note 4) |  | 50/20 |  |
|  | Actuation type |  | Belt |  |
|  | Guide type |  | Linear guide |  |
|  | Allowable external force [N] |  | 20 |  |
|  | Operating temperature range [ ${ }^{\circ} \mathrm{C}$ ] |  | 5 to 40 |  |
|  | Operating humidity range [\%RH] |  | 90 or less (No condensation) |  |
|  | Regenerative resistor |  | May be required depending on speed and work load. (Refer to page 80.) |  |
|  | Motor output [W]/Size [mm] |  | 100/ $\square 40$ | 200/ $\square 60$ |
|  | Motor type |  | AC servo motor (200 VAC) |  |
|  | Encoder |  | Absolute 20-bit encoder (Resolution: $1048576 \mathrm{p} / \mathrm{rev}$ ) |  |
|  | Power consumption [W] Note 5) | Horizontal | 65 | 190 |
|  |  | Vertical | - | - |
|  | Standby power consumption when operating [W] Note 6) | Horizontal | 2 | 2 |
|  |  | Vertical | - | - |
|  | Max. instantaneous power consumption [W] Note 7) |  | 445 | 725 |
|  | Type Note 8) |  | Non-magnetizing lock |  |
|  | Holding force [N] |  | 59 | 77 |
|  | Power consumption at $20^{\circ} \mathrm{C}$ [W] ${ }^{\text {Note 9) }}$ |  | 5.5 | 6 |
|  | Rated voltage [V] |  | 24 VDC |  |

Note 1) Please consult with SMC for non-standard strokes as they are produced as special orders.
Note 2) Check "Speed-Work Load Graph (Guide)" on page 80.
Note 3) A reference value for correcting an error in reciprocal operation.
Note 4) Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz . Test was performed in both an axial direction and a perpendicular direction to the lead screw. (Test was performed with the actuator in the initial state.)
Note 5) The power consumption (including the driver) is for when the actuator is operating.
Note 6) The standby power consumption when operating (including the driver) is for when the actuator is stopped in the set position during the operation.
Note 7) The maximum instantaneous power consumption (including the driver) is for when the actuator is operating.
Note 8) Only when motor option "With lock" is selected.
Note 9) For an actuator with lock, add the power consumption for the lock.
Note 10) Sensor magnet position is located in the table centre. For detailed dimensions, refer to "Auto Switch Mounting Position"
Note 11) Do not allow collisions at either end of the table traveling distance. Additionally, when running the positioning operation, do not set within 2 mm of both ends.
Note 12) For the manufacture of intermediate strokes, please contact SMC.
(LEJB40/Manufacturable stroke range: 200 to 2000 mm , LEJB63/Manufacturable stroke range: 300 to 3000 mm )

## Series LEJ <br> Auto Switch Mounting

## Auto Switch Mounting Position

| Model | Size | A | $\mathbf{B}$ | $\mathbf{C}$ | Operating range |
| :---: | :---: | :---: | :---: | :---: | :---: |
| LEJS | 40 | 77 | 80 | 160 | 5.5 |
| LEJB |  |  |  |  |  |
| LEJS | 63 | 83 | 86 | 172 | 7.0 |
| LEJB |  |  |  |  |  |

Note) The operating range is a guideline including hysteresis, not meant to be guaranteed. There may be large variations (as much as $\pm 30 \%$ ) depending on the ambient environment.

## Auto Switch Mounting

When mounting the auto switches, they should be inserted into the actuator's auto switches mounting groove from the direction shown in the drawing on the below. Once in the mounting position, use a flat head watchmaker's screwdriver to tighten the included auto switch mounting screw.

Auto Switch Mounting Screw Tightening Torque [ $\mathrm{N} \cdot \mathrm{m}$ ]

| Auto switch model | Tightening torque |
| :---: | :---: |
| D-M9 $\square \mathbf{( V )}$ | 0.10 to 0.15 |
| $\mathbf{D}-\mathbf{M 9} \square \mathbf{W}(\mathbf{V})$ |  |

[^4] screwdriver with a handle diameter of about 5 to 6 mm .

## Solid State Auto Switch Direct Mounting Style D-M9N(V)/D-M9P(V)/D-M9B(V) C €

## Grommet

- 2-wire load current is reduced ( 2.5 to 40 mA ).
- Using flexible cable as standard.

## ©Caution

## Precautions

Fix the auto switch with the existing screw installed on the auto switch body. The auto switch may be damaged if a screw other than the one supplied is used.

## Auto Switch Specifications

Refer to SMC website for the details about products conforming to the international standards.

Dimensions

D-M9 $\square$

D-M9 $\square$ V

## 2-Colour Indication Solid State Auto Switch Direct Mounting Style D-M9NW(V)/D-M9PW(V)/D-M9BW(V) C E

## Grommet

- 2-wire load current is reduced ( 2.5 to 40 mA ).
- Using flexible cable as standard.
- The optimum operating range can be determined by the colour of the light. (Red $\rightarrow$ Green $\leftarrow$ Red)

## Precautions

Fix the auto switch with the existing screw installed on the auto switch body. The auto switch may be damaged if a screw other than the one supplied is used.

Auto Switch Specifications
Refer to SMC website for the details about products conforming to the international standards.

PLC: Programmable Logic Controller

# Series LEJ <br> Electric Actuator/ <br> Specific Product Precautions 1 

Be sure to read this before handling. For Safety Instructions and Electric Actuator Precautions, refer to "Handling Precautions for SMC Products" and the Operation Manual on SMC website, http://www.smc.eu

## Design

## © Caution

1. Do not apply a load in excess of the operating limit.

Select a suitable actuator by work load and allowable moment. If the product is used outside of the operating limit, the eccentric load applied to the guide will be excessive and have adverse effects such as creating play on the guide, degrading accuracy and shortening the life of the product.
2. Do not use the product in applications where excessive external force or impact force is applied to it.
The product can be damaged.
The components including the motor are manufactured to precise tolerances. So that even a slight deformation may cause a malfunction or seizure.

## Selection

## © Warning

1. Do not increase the speed in excess of the specification limits..

Select a suitable actuator by the relationship of the allowable work load and speed, and the allowable speed of each stroke. If the product is used outside of the specification limits, it will have adverse effects such as creating noise, degrading accuracy and shortening the life of the product.
2. When the product repeatedly cycles with partial strokes ( 100 mm or less), lubrication can run out. Operate it at a full stroke at least once a day or every a thousand cycles.
3. When external force is applied to the table, it is necessary to add external force to the work load as the total carried load for the sizing.
When a cable duct or flexible moving tube is attached to the actuator, the sliding resistance of the table increases and may lead to operational failure of the product.

## Handling

## © Caution

1. Do not allow the table to hit the end of stroke.

When incorrect instructions are inputted, such as using the product outside of the operating limit or operation outside of actual stroke through changes in the controller/driver setting and/or origin position, the table may collide against the stroke end of the actuator. Please check these points before use.
If the table collides against the stroke end of the actuator, the guide, belt or internal stopper can be broken. This may lead to abnormal operation.

Handle the actuator with care when it is used in the vertical direction as the workpiece will fall freely from its own weight.
2. The actual speed of this actuator is affected by the work load and stroke.
Check specifications with reference to the model selection section of the catalogue.
3. Do not apply a load, impact or resistance in addition to the transferred load during return to origin.
4. Do not dent, scratch or cause other damage to the body and table mounting surfaces.

This may cause unevenness in the mounting surface, play in the guide or an increase in the sliding resistance.
5. Do not apply strong impact or an excessive moment while mounting the product or a workpiece.
If an external force over the allowable moment is applied, it may cause play in the guide or an increase in the sliding resistance.
6. The flatness of mounting surface should be within $0.1 \mathrm{~mm} / 500 \mathrm{~mm}$.

Unevenness of a workpiece or base mounted on the body of the product may cause play in the guide and an increase in the sliding resistance.
In the case of overhang mounting (including cantilever), to avoid deflection of the actuator body, use a support plate or support guide.
7. When mounting the actuator, use all mounting holes.

If all mounting holes are not used, it influences the specifications, e.g., the amount of displacement of the table increases.
8. Do not hit the table with the workpiece in the positioning operation and positioning range.
9. Do not apply external force to the dust seal band.

Particularly during the transportation.

# Series LEJ <br> Electric Actuator/ <br> Specific Product Precautions 2 

Be sure to read this before handling. For Safety Instructions and Electric Actuator Precautions, refer to "Handling Precautions for SMC Products" and the Operation Manual on SMC website, http://www.smc.eu

## Handling

## © Caution

10. When mounting the product, use screws with adequate length and tighten them with adequate torque.

Tightening the screws with a higher torque than recommended may cause a malfunction, whilst the tightening with a lower torque can cause the displacement of the mounting position or in extreme conditions the actuator could become detached from its mounting position

To prevent the workpiece fixing bolts from touching the body, use bolts that are 0.5 mm or shorter than the maximum screw-in depth. If long bolts are used, they can touch the body and cause a malfunction, etc.
11. Do not operate by fixing the table and moving the actuator body.
12. The belt drive actuator cannot be used vertically for applications.
13. Vibration may occur during operation, this could be caused by the operating conditions.
If it occurs, refer to the operation manuals of the driver and actuator.
14. When mounting the actuator using the body mounting reference plane, use a pin. Set the height of the pin to be 5 mm or more because of chamfering. (Recommended height 6 mm )

## Maintenance

## $\triangle$ Warning

## Maintenance frequency

Perform maintenance according to the table below.

| Frequency | Appearance check | Internal check | Belt check |
| :--- | :---: | :---: | :---: |
| Inspection before <br> daily operation | $\bigcirc$ | - | - |
| Inspection every <br> 6 months/1000 km/ <br> 5 million cycles* | $\bigcirc$ | $\bigcirc$ | $\bigcirc$ |

* Select whichever comes sooner.
- Items for visual appearance check

1. Loose set screws, Abnormal dirt
2. Check of flaw and cable joint
3. Vibration, Noise

- Items for internal check

1. Lubricant condition on moving parts.

* For lubrication, use lithium grease No. 2.

2. Loose or mechanical play in fixed parts or fixing screws.

- Items for belt check

Stop operation immediately and replace the belt when belt appear to be below. Further, ensure your operating environment and conditions satisfy the requirements specified for the product
a. Tooth shape canvas is worn out.

Canvas fiber becomes fuzzy. Rubber is removed and the fiber becomes whitish. Lines of fibers become unclear.
b. Peeling off or wearing of the side of the belt

Belt corner becomes round and frayed thread sticks out.
c. Belt partially cut

Belt is partially cut. Foreign matter caught in teeth other than cut part causes flaw.
d. Vertical line of belt teeth

Flaw which is made when the belt runs on the flange.
e. Rubber back of the belt is softened and sticky.
f. Crack on the back of the belt

## Power Supply Wire Specifications

| Item | Specifications |
| :---: | :---: |
| Applicable <br> wire size | L1, L2, L3, L1C, L2C <br> Single wire, Twisted wire, AWG14 $\left(2.0 \mathrm{~mm}^{2}\right)$ |
| Stripped wire <br> length |  |

Main circuit

Control Signal Wiring Example: LECYM

Note 1) $\mathcal{J}$ shows twisted-pair wires.
Note 2) The 24 VDC power supply is not included. Use a 24 VDC power supply with double insulation or reinforced insulation.
Note 3) When using the safety function, a safety function device must be connected to the wiring that is necessary to activate the safety function. Otherwise, the servo motor is not turned ON. When not using the safety function, use the driver with the Safety Jumper Connector (provided as an accessory) inserted into the CN8.
Note 4) Always use line receivers to receive the output signals.

* The functions allocated to the input signals /DEC, P-OT, N-OT, /EXT1, /EXT2 and /EXT3, and the output signals /SO1, /SO2 and /SO3 can be changed
by setting the parameters.
Note 5) Compatible with the HWBB function (STO function (IEC61800-5-2)).

# ac Servo Motor Driver Series $L E C Y_{U}^{M}$ 

Control Signal Wiring Example: LECYU

Note 1) $\mathcal{f}$ shows twisted-pair wires.
Note 2) The 24 VDC power supply is not included. Use a 24 VDC power supply with double insulation or reinforced insulation.
Note 3) When using the safety function, a safety function device must be connected to the wiring that is necessary to activate the safety function. Otherwise, the servo motor is not turned ON. When not using the safety function, use the driver with the Safety Jumper Connector (provided as an accessory) inserted into the CN8.
Note 4) Always use line receivers to receive the output signals.

* The functions allocated to the input signals /DEC, P-OT, N-OT, /EXT1, /EXT2 and /EXT3, and the output signals /SO1, /SO2 and /SO3 can be changed
by setting the parameters.
Note 5) Compatible with the HWBB function (STO function (IEC61800-5-2)).

## Series $L E C Y_{U}^{M}$

## Options

## MMECHATROLINK cable type

* LEC-CYM- $\square$ is JEPMC-W6002- $\square \square-E$ manufactured by YASKAWA CONTROLS CO., LTD.
* LEC-CYU- $\square$ is JEPMC-W6012- $\square \square$-E manufactured by YASKAWA CONTROLS CO., LTD.

## MMECHATROLINK-II cable

## WMECHATROLINK-III cable

## Terminating connector for $\mathbf{M M}^{\text {MECHATROLINK-II }}$

## LEC-CYRM

* LEC-CYRM is JEPMC-W6022-E manufactured by YASKAWA CONTROLS CO., LTD.

## Options

LECYM2 LECYU2
Drivers

## Setup software (SigmaWin $+^{\text {TM }}$ ) (LECYM/LECYU common)

* Please download the SigmaWin+ ${ }^{\text {TM }}$ via our website.

SigmaWin $+^{T M}$ is a registered trademark or trademark of YASKAWA Electric Corporation.
Adjustment, waveform display, diagnostics, parameter read/write, and test operation can be performed upon a PC. Compatible PC
When using setup software (SigmaWin $+^{\top M}$ ), use an IBM PC/AT compatible PC that meets the following operating conditions.
Hardware Requirements

| Equipment |  | Setup software (SigmaWin ${ }^{\text {TM }}$ ) |
| :---: | :---: | :---: |
| Note 1) 2) 3) 4) PC | OS | Windows ${ }^{\circledR}$ XP Note 5), Windows Vista ${ }^{\circledR}$, Windows ${ }^{\circledR} 7$ (32-bit/64-bit) |
|  | Available HD space | 350 MB or more (When the software is installed, 400 MB or more is recommended.) |
|  | Communication interface | Use USB port. |
| Display |  | XVGA monitor (1024 x 768 or more, "The small font is used.") 256 colour or more ( 65536 colour or more is recommended.) The connectable with the above PC |
| Keyboard |  | The connectable with the above PC |
| Mouse |  | The connectable with the above PC |
| Printer |  | The connectable with the above PC |
| USB cable |  | LEC-JZ-CVUSB Note 6) |
| Other |  | Adobe Reader Ver. 5.0 or higher (* Except Ver. 6.0) |

Note 1) Windows, Windows Vista ${ }^{\circledR}$, Windows ${ }^{\circledR} 7$ are registered trademarks of Microsoft Corporation in the United States and/or other countries.
Note 2) On some PCs, this software may not run properly.
Note 3) Not compatible with 64-bit Windows ${ }^{\circledR}$ XP and 64 -bit Windows Vista ${ }^{\circledR}$.
Note 4) For Windows ${ }^{\circledR}$ XP, please use it by the administrator authority (When installing and using it.).
Note 5) In PC that uses the program to correct the problem of HotfixQ328310, it is likely to fail in the installation. In that case, please use the program to correct the problem of HotfixQ329623.
Note 6) Order USB cable separately.

## Battery (LECYM/LECYU common)

## LEC-JZ-CVBAT

* JZSP-BA01 manufactured by YASKAWA CONTROLS CO., LTD.

Battery for replacement.
Absolute position data is maintained by installing the battery to the battery case of the encoder cable.

## USB cable ( 2.5 m ) <br> LEC-JZ-CVUSB

* JZSP-CVS06-02-E manufactured by YASKAWA CONTROLS CO., LTD.

Cable for connecting PC and driver when using the setup software (SigmaWin+ ${ }^{\text {TM }}$ ).
Do not use any cable other than this cable.

## Cable for safety function device (3 m) <br> LEC-JZ - CVSAF

* JZSP-CVH03-03-E manufactured by YASKAWA CONTROLS CO., LTD.

Cable for connecting the driver and device when using the safety function.
Do not use any cable other than this cable.

# Series LECYM/LECYU <br> AC Servo Motor Driver/ Specific Product Precautions 1 

$\triangle$
Be sure to read this before handling. For Safety Instructions and Electric Actuator Precautions, refer to "Handling Precautions for SMC Products" and the Operation Manual on SMC website, http://www.smc.eu

## Design/Selection

## . Warning

1. Use the specified voltage.

If the applied voltage is higher than the specified voltage, malfunction and damage to the driver may result. If the applied voltage is lower than the specified voltage, there is a possibility that the load cannot be moved due to internal voltage drop. Check the operating voltage prior to start. Also, confirm that the operating voltage does not drop below the specified voltage during operation.
2. Do not use the products outside the specifications.

Otherwise, fire, malfunction or damage to the driver/actuator can result. Check the specifications before use.
3. Install an emergency stop circuit.

Install an emergency stop outside the enclosure in easy reach to the operator so that the operator can stop the system operation immediately and intercept the power supply.
4. To prevent danger and damage due to a breakdown or malfunction of these products, which may occur at a certain probability, a backup system should be arranged in advance by using a multiple-layered structure or by making a fail-safe equipment design etc.
5. If there is a risk of fire or personal injury due to abnormal heat generation, sparking, smoke generated by the product, etc., cut off the power supply from this product and the system immediately.

## Handling

## © Warning

1. Never touch the inside of the driver and its peripheral devices.
Otherwise, electric shock or failure can result.
2. Do not operate or set up this equipment with wet hands. Otherwise, electric shock can result.
3. Do not use a product that is damaged or missing any components.
Electric shock, fire or injury can result.
4. Use only the specified combination between the electric actuator and driver.
Otherwise, it may cause damage to the driver or to the other equipment.
5. Be careful not to touch, get caught or hit by the workpiece while the actuator is moving.
An injury can result.
6. Do not connect the power supply or power up the product until it is confirmed that the workpiece can be moved safely within the area that can be reached by the workpiece.
Otherwise, the movement of the workpiece may cause an accident.
7. Do not touch the product when it is energised and for some time after the power has been disconnected, as it is very hot.
Otherwise, it may cause burns due to the high temperature.
8. Check the voltage using a tester at least 5 minutes after power-off when performing installation, wiring and maintenance.
Otherwise, electric shock, fire or injury can result.

## Handling

## $\triangle$ Warning

9. Static electricity may cause a malfunction or damage the driver. Do not touch the driver while power is supplied to it.
Take sufficient safety measures to eliminate static electricity when it is necessary to touch the driver for maintenance.
10. Do not use the products in an area where they could be exposed to dust, metallic powder, machining chips or splashes of water, oil or chemicals.
Otherwise, a failure or malfunction can result.
11. Do not use the products in a magnetic field.

Otherwise, a malfunction or failure can result.
12. Do not use the products in an environment where flammable, explosive or corrosive gases, liquids or other substances are present.
Otherwise, fire, explosion or corrosion can result.
13. Avoid heat radiation from strong heat sources, such as direct sunlight or a hot furnace.
Otherwise, it will cause a failure to the driver or its peripheral devices.
14. Do not use the products in an environment with cyclic temperature changes.
Otherwise, it will cause a failure to the driver or its peripheral devices.
15. Do not use the products in an environment where surges are generated.
Devices (solenoid type lifters, high frequency induction furnaces, motors, etc.) that generate a large amount of surge around the product may lead to deterioration or damage to the internal circuits of the products. Avoid supplies of surge generation and crossed lines.
16. Do not install these products in a place subject to vibration and impact.
Otherwise, a malfunction or failure can result.
17. When a surge generating load such as a relay or solenoid valve is directly driven, use a product that incorporates a surge absorption element.

## Mounting

## © Warning

1. Install the driver and its peripheral devices on fireproof material.
Direct installation on or near flammable material may cause fire.
2. Do not install these products in a place subject to vibration and impact.
Otherwise, a malfunction or failure can result.
3. The driver should be mounted on a vertical wall in a vertical direction.
Also, do not cover the driver's suction/exhaust ports.
4. Install the driver and its peripheral devices on a flat surface.
If the mounting surface is not flat or uneven, excessive force may be applied to the housing and other parts resulting in a malfunction.

# Series LECYM/LECYU <br> AC Servo Motor Driver/ Specific Product Precautions 2 

Be sure to read this before handling. For Safety Instructions and Electric Actuator Precautions, refer to "Handling Precautions for SMC Products" and the Operation Manual on SMC website, http://www.smc.eu

## Power Supply

## $\triangle$ Caution

1. Use a power supply with low noise between lines and between power and ground.
In cases where noise is high, use an isolation transformer.
2. Take appropriate measures to prevent surges from lightning. Ground the surge absorber for lightning separately from the grounding of the driver and its peripheral devices.

## Wiring

## © Warning

1. The driver will be damaged if a commercial power supply ( $100 \mathrm{~V} / 200 \mathrm{~V}$ ) is added to the driver's servo motor power (U, V, W). Be sure to check wiring such as wiring mistakes when the power supply is turned on.
2. Connect the ends of the $\mathbf{U}, \mathrm{V}, \mathrm{W}$ wires from the motor cable correctly to the phases ( $\mathrm{U}, \mathrm{V}, \mathrm{W}$ ) of the servo motor power. If these wires do not match up, it is unable to control the servo motor.

## Grounding

## © Warning

1. For grounding actuator, connect the copper wire of the actuator to the driver's protective earth (PE) terminal and connect the copper wire of the driver to the earth via the control panel's protective earth (PE) terminal. Do not connect them directly to the control panel's protective earth (PE) terminal.

2. In the unlikely event that malfunction is caused by the ground, it may be disconnected.

## Maintenance

## © Warning

1. Perform maintenance checks periodically.

Confirm wiring and screws are not loose.
Loose screws or wires may cause unexpected malfunction.
2. Conduct an appropriate functional inspection and test after completed maintenance.
In case of any abnormalities (if the actuator does not move or the equipment does not operate properly etc.), stop the operation of the system.
Otherwise, unexpected malfunction may occur and safety cannot be assured.
Conduct a test of the emergency stop to confirm the safety of the equipment.
3. Do not disassemble, modify or repair the driver or its peripheral devices.
4. Do not put anything conductive or flammable inside the driver.
Otherwise, fire can result.
5. Do not conduct an insulation resistance test or insulation withstand voltage test.
6. Reserve sufficient space for maintenance.

Design the system so that it allows required space for maintenance.

These safety instructions are intended to prevent hazardous situations and／or equipment damage．These instructions indicate the level of potential hazard with the labels of＂Caution，＂＂Warning＂or＂Danger．＂They are all important notes for safety and must be followed in addition to International Standards（ISO／IEC）＊1），and other safety regulations．

## © Warning

1．The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications．
Since the product specified here is used under various operating conditions，its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results． The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product．This person should also continuously review all specifications of the product referring to its latest catalogue information，with a view to giving due consideration to any possibility of equipment failure when configuring the equipment．
2．Only personnel with appropriate training should operate machinery and equipment．
The product specified here may become unsafe if handled incorrectly．The assembly， operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced．

3．Do not service or attempt to remove product and machinery／equipment until safety is confirmed．
1．The inspection and maintenance of machinery／equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed．
2．When the product is to be removed，confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut，and read and understand the specific product precautions of all relevant products carefully．
3．Before machinery／equipment is restarted，take measures to prevent unexpected operation and malfunction．
4．Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions．
1．Conditions and environments outside of the given specifications，or use outdoors or in a place exposed to direct sunlight．
2．Installation on equipment in conjunction with atomic energy，railways，air navigation， space，shipping，vehicles，military，medical treatment，combustion and recreation，or equipment in contact with food and beverages，emergency stop circuits，clutch and brake circuits in press applications，safety equipment or other applications unsuitable for the standard specifications described in the product catalogue．
3．An application which could have negative effects on people，property，or animals requiring special safety analysis．
4．Use in an interlock circuit，which requires the provision of double interlock for possible failure by using a mechanical protective function，and periodical checks to confirm proper operation．

## $\triangle$ Caution

1．The product is provided for use in manufacturing industries．
The product herein described is basically provided for peaceful use in manufacturing industries．
If considering using the product in other industries，consult SMC beforehand and exchange specifications or a contract if necessary．
If anything is unclear，contact your nearest sales branch
＊1）ISO 4414：Pneumatic fluid power－General rules relating to systems．
ISO 4413：Hydraulic fluid power－General rules relating to systems．
IEC 60204－1：Safety of machinery－Electrical equipment of machines．
（Part 1：General requirements）
ISO 10218－1：Manipulating industrial robots－Safety． etc．

## Limited warranty and Disclaimer／ Compliance Requirements

The product used is subject to the following＂Limited warranty and Disclaimer＂and＂Compliance Requirements＂．
Read and accept them before using the product．

## Limited warranty and Disclaimer

1．The warranty period of the product is 1 year in service or 1.5 years after the product is delivered，wichever is first．＊2） Also，the product may have specified durability，running distance or replacement parts．Please consult your nearest sales branch．

2．For any failure or damage reported within the warranty period which is clearly our responsibility，a replacement product or necessary parts will be provided． This limited warranty applies only to our product independently，and not to any other damage incurred due to the failure of the product．
3．Prior to using SMC products，please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products．
＊2）Vacuum pads are excluded from this 1 year warranty．
A vacuum pad is a consumable part，so it is warranted for a year after it is delivered． Also，even within the warranty period，the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty．

## Compliance Requirements

1．The use of SMC products with production equipment for the manufacture of weapons of mass destruction（WMD）or any other weapon is strictly prohibited．
2．The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction．Prior to the shipment of a SMC product to another country，assure that all local rules governing that export are known and followed．

## $\triangle$ Caution

SMC products are not intended for use as instruments for legal metrology．
Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology（measurement）laws of each country． Therefore，SMC products cannot be used for business or certification ordained by the metrology（measurement）laws of each country．

Safety Instructions $\quad$ Be sure to read＂Handling Precautions for SMC Products＂（M－E03－3）before using．
